Omega upgrades to dtSearch® for integrated financial and practice management software suite

Targeted towards mid-to-large law firms, Omega sought state-of-the-art scalability in a search engine

PHOENIX, AZ and BETHESDA, MARYLAND (July 7, 2009). Omega Legal Systems provides mid-to-large size law firms an integrated financial and practice management software suite that, since 1975, has set the standard for return on investment, system performance and client service. The Smart Choice for Text Retrieval® since 1991, dtSearch specializes in enterprise and developer text retrieval software. Together, the two companies announce that Omega Legal^{VX} now embeds the dtSearch Engine for maximum scalability across even the largest volumes of data.

Omega Legal^{VX}. Using Omega Legal^{VX}, firms can instantly access financial data and efficiently manage time, billing, accounting and business intelligence to streamline workflow, improve cash flow, increase productivity and boost profitability – all with only a few clicks. Features include streamlined reporting processes and capabilities, paperless office, enhanced collections, and easy marketing. Omega Legal^{VX} can even analyze influences affecting firm performance, and allow the firm to learn from its most profitable practice areas.

“Software for law office practice management should work the way you do, minimizing steps and streamlining workflow,” explains Don Gall, Omega’s President and Founder. “It must be reliable and not require extensive IT support or lots of hardware and servers. Additionally, it should retain as much detailed historical data as you want to support strategic decision making. That’s what Omega Legal^{VX} brings to your desktop.”

dtSearch Engine now embedded. For enhanced searching within Omega Legal^{VX}, the company switched to the dtSearch Engine for Win & .NET. “When our existing search engine started having problems due to content volume, we started evaluating replacements,” explains Ankur Jethi, Omega’s Lead Developer. “Integrating dtSearch with our client-server application was a snap. Within a few days, we had a fully functional solution that provides our clients a richer feature set and improved stability.”

dtSearch products can index over a terabyte of data in a single index – as well as create and instantly search an unlimited number of indexes. The software offers over two dozen search options, including Unicode support covering hundreds of international languages. Proprietary file format support highlights hits in all popular file types. A built-in Spider supports searching of local and remote, public and secure, dynamic and static web data, with WYSIWYG hit-highlighted displays. The dtSearch Engine API supports .NET, Java, C++, SQL, etc., including native 64-bit Windows/Linux support.

“We are very pleased to be working with Omega Legal Systems,” comments Kate Tretter, Vice President of Marketing, dtSearch Corp. “Omega Legal^{VX} now sets the standard in scalable practice management for any size legal practice.”
